Background

In our September 30, 2013, proposed rule (78 FR 60024), we proposed to list the rufa red knot as threatened due to loss of both breeding and nonbreeding habitat; potential for disruption of natural predator cycles on the breeding grounds; reduced prey availability throughout the nonbreeding range; and increasing frequency and severity of asynchronies (“mismatches”) in the timing of the birds’ annual migratory cycle relative to favorable food and weather conditions.

For more information on previous Federal actions concerning the rufa red knot, or information regarding its biology, status, distribution, and habitat, refer to the proposed rule published in the **Federal Register** on September 30, 2013 (78 FR 60024) and its four supplemental documents, all of which are available online at <http://www.regulations.gov> at Docket No. FWS-R5-ES-2013-0097 or by mail from the New Jersey Ecological Services Field Office (see **FOR FURTHER INFORMATION CONTACT**).
